

A global intelligence layer for longevity science.

Immortal.life connects research, clinical trials, universities, funding, regulatory information, corrections, and authoritative global resources through one source-linked longevity knowledge system.

LIVE PLATFORM | CATEGORY-DEFINING DOMAIN | INSTITUTIONAL PILOT READY

180

LONGEVITY TOPICS

organised across 9 domains

5,435

RESEARCH RECORDS

current public eligible set

531

CLINICAL TRIALS

current public eligible set

1,256

UNIVERSITIES

represented across 89 countries

231

OFFICIAL RESOURCES

directory coverage across 195 countries

547

FUNDER IDENTITIES

linked to 5,777 award entities

Public platform snapshot, 28 Sep 2026. Counts change as eligible history is indexed.

LATEST PRODUCT ACHIEVEMENTS

From records to decision-ready context

● Living Evidence Dossiers

Reader-first pages for all 180 topics, connecting human evidence, trials, universities, safety context, funding, timelines, and clearly stated unknowns.

● Funding Radar

5,777 award entities, 547 funder identities, 1,122 linked publications, and permanent source-backed funder profiles without inferred spending or impact claims.

● Trial Results Gap Monitor

A transparent registry signal tracking 260 completed longevity trials and whether structured results are visible after a defined reporting window.

● Evidence Compare

Side-by-side, source-linked comparison of two topic landscapes without ranking treatments or turning record counts into medical conclusions.

Every public insight links back to its source. Immortal.life provides research intelligence and discovery infrastructure, not medical advice or expert endorsement.

A strategic opportunity to own the trust layer for a fast-forming global category.

Longevity intelligence is fragmented across databases, trial registries, institutions, funders, regulators, and jurisdictions. Immortal.life brings those signals together under an intuitive exact-match brand.

01

Defensible assets

- The exact-match Immortal.life domain and a distinctive, credible public brand.
- A 180-topic taxonomy connecting research, trials, universities, funding, regulators, and source records.
- Automated ingestion, normalization, relevance, deduplication, quality, provenance, and source-rights infrastructure.
- Connected public products: dossiers, comparisons, funding intelligence, trial-transparency monitoring, search, feeds, and datasets.
- Reusable institutional workflows that convert source changes into auditable intelligence rather than raw-data dumps.

03

Strategic fit

Longevity biotechnology and pharmaceutical companies; scientific-data and clinical-intelligence platforms; professional publishers; research institutes and foundations; preventive-health businesses; family offices; and mission-driven investors seeking a durable longevity information asset.

02

Commercial path

- A six-week institutional pilot focused on 5-10 topics, interventions, companies, competitors, or strategic questions.
- A baseline landscape followed by weekly meaningful-change briefings, recruiting-trial alerts, university activity, integrity notices, and source-linked exports.
- Recurring professional subscriptions, private dashboards, taxonomy licensing, compliant data services, or API access.
- Strategic partnership or acquisition by an organisation that can accelerate distribution, trust, and global coverage.

04

Why now

The platform is live, its core information architecture is built, and the product has moved beyond listings into interpretable evidence, funding, comparison, and transparency tools. A strategic owner or partner can now compound the value through distribution and institutional adoption.

CURRENT STAGE

Live, pre-revenue, and ready for a first institutional pilot.

Historical coverage is still expanding. Public directory coverage is not represented as live data integration. Source reuse is permission-aware and fail-closed for commercial outputs.

Open to serious strategic conversations
