

One place to understand what is changing in longevity science

Immortal.life turns scattered research, clinical trials, universities, funding and official notices into a source-linked intelligence system that people can understand.

LIVE PLATFORM

180 LONGEVITY TOPICS

PILOT READY

THE PROBLEM

Important longevity knowledge is scattered across thousands of places

A team following one therapy, company or scientific question must search papers, trial registries, universities, funders and official notices separately.

THE QUESTIONS PEOPLE ACTUALLY HAVE

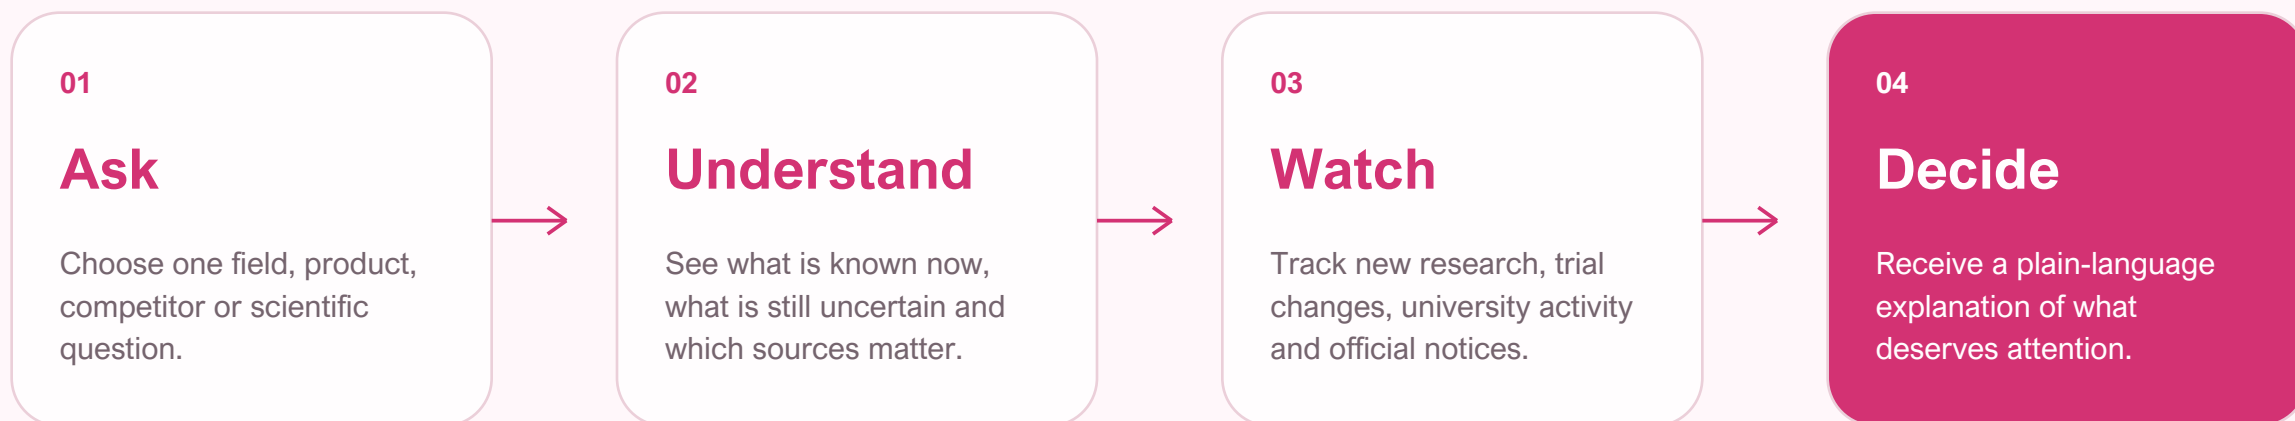

- What has been tested in people?
- Which trials are active now?
- Who is working on this field?
- Did the evidence change recently?
- Can I inspect the original source?

Most tools help people find records. Immortal.life helps them understand the field.

THE SOLUTION

One important question becomes a maintained answer

The user chooses what matters. Immortal.life builds the starting picture, watches the evidence, and explains only meaningful changes.

Every number and important statement opens the source behind it.

LIVE PROOF

A decision-maker sees the question before the data

The live pilot shows what has changed in cognitive-training research and whether the field is producing decision-ready human evidence.

[OPEN THE LIVE PILOT](#)**541****Indexed research**[See the research →](#)**254****Human studies**[See the human studies →](#)**71****Cognitive Training-related trials**[See trial registrations →](#)**13****Active trials**[See active trials →](#)**9,604****People listed in trials**[See listed enrollment →](#)**Growing****Research activity**[View the trend →](#)

DECISION VIEW

See how the field is moving—not only how many records exist.

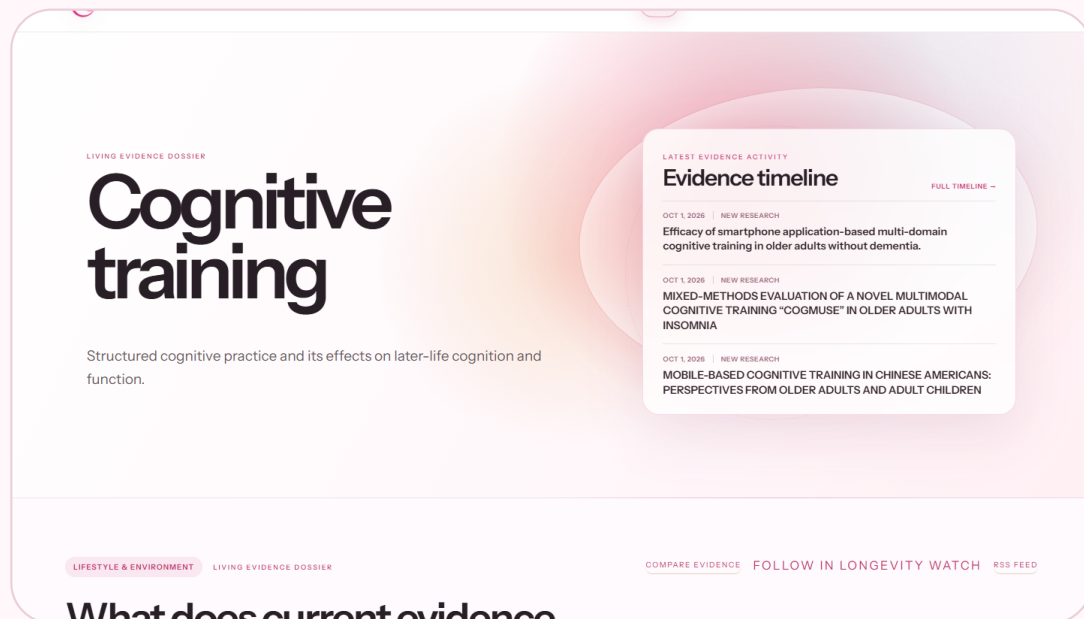

These views connect research maturity, recent activity, trial progress, geography, study questions, institutions, and missing results. Every interactive element opens the records behind it.

EVIDENCE MATURITY PATH

How far has Cognitive Training research progressed?

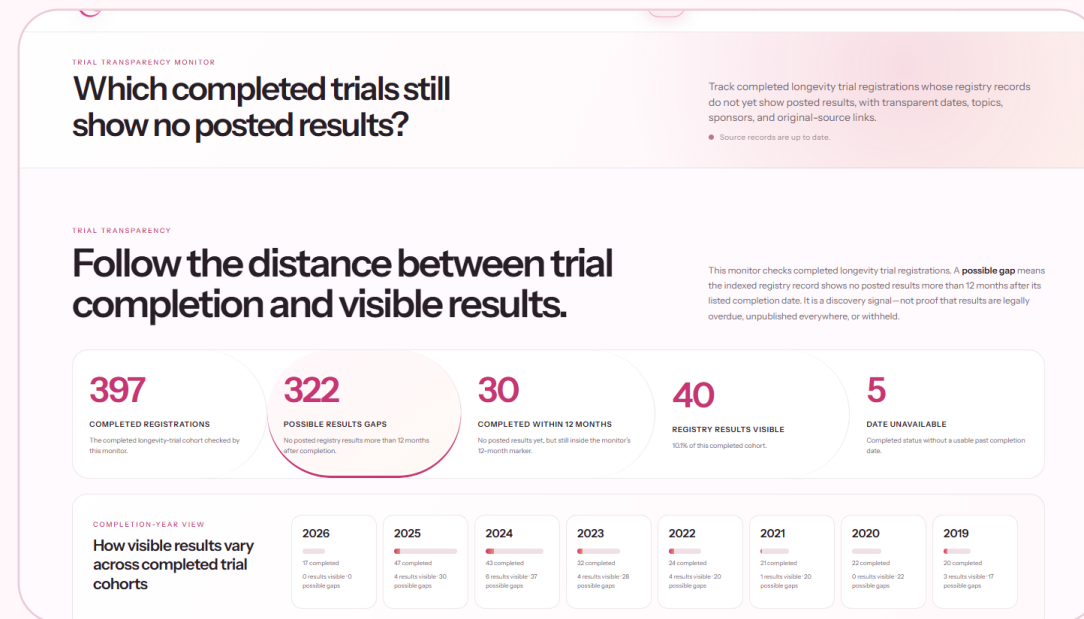

[OPEN DOSSIER](#)

The platform separates record volume from meaning

Living Evidence Dossiers

A maintained page for each of 180 longevity topics, with recent evidence, trials, universities and clear unknowns.

Trial Results Gap Monitor

Shows completed trial registrations whose indexed registry record still has no structured results after a defined window.

WHAT HAS BEEN BUILT

A working knowledge system with a rare category domain

BRAND AND DISTRIBUTION

The exact-match immortal.life domain, public platform, indexed pages and a distinctive visual identity.

KNOWLEDGE STRUCTURE

A 180-topic taxonomy connecting research, trials, universities, funding, sources and change timelines.

OPERATING SYSTEM

Ingestion, normalization, relevance matching, deduplication, provenance and monitoring workflows.

STRATEGIC USE

Several kinds of buyer can use the same foundation

- | | | |
|----|---|--|
| 01 | Pharma and biotechnology | Monitor therapeutic fields, trial movement, competitors and emerging institutions. |
| 02 | Scientific information companies | Add a source-linked longevity vertical without building the taxonomy and workflows from zero. |
| 03 | Investors and family offices | Track scientific fields, companies, funders and evidence changes around an investment question. |
| 04 | Research institutions | Foundations and research institutes can follow programmes, university activity, corrections and gaps in trial reporting. |
| 05 | Preventive-health platforms | Offer clearer public education with explicit limits and links to original sources. |

Commercial routes: paid pilots, professional subscriptions, private dashboards, licensing and compliant data services.

CURRENT STAGE

The product is live. A strategic owner can accelerate distribution.

Immortal.life is live, pre-revenue and ready for its first paid institutional pilots. Historical coverage continues to expand. The core public product and information architecture already exist.
